

# Deisi Cabrera

School: Contra Costa College  
Major: Accounting & Civil Engineering  
Entering: Freshman year  
Internship: Accounts payable

## **What projects are you currently working on?**

A project I'm working on with one of the other interns is Paradise project billing. We are going back and talking to some of the people who were involved in this job to find any issues and ways to keep those things from happening again. I've also been working with the wonderful AP department, looking at invoices as well as extracting and attaching them. They've taught me how to reconcile statements and communicate with vendors. They are such a wonderful team. I'm so grateful I got the chance to work with them.

## **What skills /experience do you hope to gain by the end of this internship?**

Some of the skills I hope to expand on this internship are my analytical, computer and communication skills. I feel like these are tough skills that will be important for any job or career.

## **What is something new you have learned so far?**

I've learned that there is more than one department to accounting, about the roles/responsibilities, and how each person really must be accountable for their part because it affects the others. I came into this internship at a time where the AP department were going through some challenges. I was able to help and see how they were able to get back on track and rolling along like they usually do. They taught me how to reconcile statements, go over invoice's extract and attach them, as well as communicate with vendors and how to deal with the various emails.

## **What are your goals for after this internship and how did it help?**

This internship helped really me understand different concepts in the majors I'm looking into. It also gave me a much clearer mind of what I want and if I really want to go on and presume what I had in mind. Now one of my goals is to be much more curious and ask questions
