

Lesley Roman

School: Sacramento State
Major: Mechanical Engineering
Entering: [final semester]
Internship: Engineering

Lesley's Hobbies:

"I love the outdoors. Hiking, skating, swimming, bike rides, and I've been doing a lot of fishing lately, too."

What interests you about your particular major or industry?

I always loved to learn how mechanisms work and how to make them work better. Mechanical engineering is a very broad field and I love that I am able to choose between energy materials & structures, electronics, aerodynamics, and the automotive industry.

Was your first field visit any different than you had expected?

On my first field visit, I was simply expecting to see a lot of construction occurring. However, I found it real interesting to see how the field crew interprets CAD drawings.

What drew you to accept an internship position from Charge?

I want to expand my knowledge as much as I can. The engineering at Charge is different

than what I am used to through schooling, so I took it as an opportunity to learn more.

What Charge Internship project are you most excited about?

I am most excited about the Mobile Home Projects (MHPs) because it connects the drafters, the PG&E crew, the surveyors, the clients, the engineers, and Charge's field crew all in one project. I want to help accomplish such projects through teamwork.

What skill(s) do you hope to refine during your internship at Charge?

As a mechanical engineering major, I am very familiar with part and assembly drawings, but I have not had a lot of exposure to the types of drawings that Charge does. I hope to gain more experience and skills in order to create such drawings myself.
