

Shawn Baur

School: San Jose State
Major: Electrical Engineering
Entering: Senior year
Internship: Engineering

Shawn's Hobbies:

"I like to play video games. Recently, I've been playing Elden Ring."

What interests you about your particular major or industry?

I enjoy math and science, so I wanted to find something that was more involved in those subjects. Engineering is a great middle ground for both of those subjects which I really enjoy learning about.

Was your first field visit any different than you had expected?

No, not really. I had some experience with field work during my time working with the city of Sacramento. That internship was not as focused on construction necessarily, but I got exposure to how situations were handled in the field and to some of the machinery used.

What drew you to accept an internship position from Charge?

I wanted to gain industry experience

similar to the permitting work I had done in the past.

What Charge Internship project are you most excited about?

I am excited to get into the design portion of the mobile home project. It sounds like from what Daniel Villarreal was saying, he will be having me do some of the design work for the Twin Cities job.

What skill(s) do you hope to refine during your internship at Charge?

I would like to improve my Excel skills and CAD skills from a more program-based perspective. I would also like to improve my skills working in a team, communication skills, and time management skills.
