

## Victor Ortiz

School: Sacramento State  
Major: Construction Management  
Entering: Senior year  
Internship: VPC Field Ops

### Victor's Hobbies:

"I enjoy going out with friends, eating burritos, watching movies, hunting, and having a good time."

### What interests you about your particular major or industry?

What interests me are the variety of opportunities and jobs. The vast majority of jobs in the engineering fields are ones that I know I am interested in trying.

### Was your first field visit any different than you had expected?

It was actually a lot smaller than I had expected. I was thinking there would be lots of workers of different specialties at the site, but it was only five of us.

### What drew you to accept an internship position from Charge?

I have a friend who had a very positive experience working for Charge. He worked with Frank O'Connell and learned a lot from his experience. What appealed to me was the opportunity to gain field knowledge. My previous work experience

was mainly me completing work behind a desk, so I wanted to spend more time visiting job sites and learning from people in the field.

### What Charge Internship project are you most excited about?

It would have to be the one I am helping Frank O'Connell and Jon Perez estimate, which is the Carquinez Highlands project. That means estimating the gas and electric that will be installed. It is a mobile home park in Vallejo.

### What skill(s) do you hope to refine during your internship at Charge?

I hope to improve my field knowledge. There are many opportunities to gain field knowledge or learn from my mentor, Frank O'Connell. I can carry this knowledge into any project I am involved with in the future.
