Sergio Rodriguez

Computer Science Major
California State University, Sacramento
Internship: IT

What brought you to Charge? How did you see it fit into your professional goals?

I learned about Charge through a friend who had attended a career fair at my school. He put me in contact with Charge HR, and I reviewed the company website. I could see that Charge was growing rapidly and had a great work culture, and I wanted to be part of that and learn from others for my professional development.

What was your onboarding process like?

My onboarding process has been relatively straight-forward. I help with whatever I can when I am needed and have been introduced to a few projects with my team thus far.

Can you describe a project you're working on?

One big project I am working on is the migration of all company-managed devices from one management system to another. I have learned how these systems are used in an enterprise environment to streamline the process of managing technology.

What is something you admire about Charge, as well as your internship so far?

I admire that Charge is very transparent, takes care of its employees, and prides itself on safety.

What skill(s) do you hope to improve upon over your internship period?

I hope to improve my collaborative skills by working with others. One of the big projects I am working on for the IT team is helping others with their technology needs. I want to be able to gain technical knowledge from my mentors, and also learn how this is applied to the business as a whole.

What is next after your internship is over?

After my internship ends, I will go back to school full-time to finish my bachelor's degree in computer science. Hopefully, I can continue as an intern or work at some capacity with Charge. I will continue to study IT related topics and pursue a full-time position in preparation for my graduation next spring.
